NGUYEN XUAN HIEU

Backend Developer | Java & C#/.NET

hxn2k3@gmail.com 0778534560 hxn2k3SGU

EXPERIENCE

FPT Software *3 months*

Java Developer Intern

- Participated in developing and modifying Java-based features for an enterprise software system serving a Japanese client.
- Read and analyzed Japanese functional design documents, including screen designs, screen transitions, event definitions, and business logic.
- Implemented and modified Java functions based on business requirements and technical specifications.
- Participated in developing inventory management features involving barcode scanning, location validation, lot information, and inventory quantity processing.
- Worked with SQL and relational databases to query, validate, and process business data.
- Mapped and verified data between database tables, Java source code, and functional design documents.
- Performed debugging, bug fixing, and functional testing to ensure system behavior matched the specifications.
- Used Git and GitLab for source control, branch management, commits, code pushes, Merge Requests, and code reviews.
- Updated source code based on reviewer feedback and collaborated with team members throughout the development process.

PROJECTS

Tap Hoa Xanh – E-commerce Website *GitHub Repository*

Full-Stack Developer

- Developed a full-stack e-commerce website using Spring Boot, Next.js, TypeScript, and PostgreSQL.
- Implemented user authentication, product management, shopping cart, and order processing features.
- Designed and developed RESTful APIs and organized the backend codebase into maintainable modules.
- Implemented database access and business logic using Spring Data JPA and PostgreSQL.
- Used Flyway for database migrations, JUnit for backend testing, and Docker Compose for the local development environment.
- **Technologies:** Java, Spring Boot, Spring Data JPA, Next.js, TypeScript, PostgreSQL, Docker, Flyway, JUnit

Airline Ticket Booking Website *Backend* *Frontend*

Team Project – Full-Stack Developer

- Collaborated in developing an airline ticket booking platform using Spring Boot, React, and MySQL.
- Implemented flight search, ticket booking, additional service selection, transaction history, and online check-in features.
- Developed authentication and authorization using Spring Security, JWT, Google OAuth2, and email verification.
- Integrated VNPay payments and implemented real-time flight updates using WebSocket.
- Generated PDF documents using JasperReports and worked with relational database operations through Spring Data JPA.
- **Technologies:** Java 21, Spring Boot, Spring Security, Spring Data JPA, React, Vite, MySQL, WebSocket, VNPay, JasperReports

Store Management and Point-of-Sale System *GitHub Repository*

Team Project – Full-Stack Developer

- Collaborated in developing a store management and point-of-sale system using ASP.NET Core, Vue.js, and MySQL.

- Implemented inventory, product, customer, order, payment, refund, and promotion management features.
- Developed JWT-based authentication with refresh tokens and role-based access control.
- Integrated VNPay payments, AWS S3 image storage, dashboard analytics, and PDF invoice generation.
- **Technologies:** C#, .NET 9, ASP.NET Core, Entity Framework Core, Vue 3, MySQL, JWT, AWS S3, VNPay

SKILLS

Programming Languages: Java, SQL, JavaScript/TypeScript, C#, Python, C++, HTML/CSS
Java / Backend: Spring Boot, Spring Security, Spring Data JPA, RESTful API, JUnit
Frontend: React, Next.js, Vue.js, Bootstrap
Other Frameworks: ASP.NET Core, Entity Framework Core, FastAPI
Databases: MySQL, PostgreSQL
Tools: Git, Docker, IntelliJ IDEA, VS Code, Visual Studio
Knowledge: Object-Oriented Programming, REST APIs, Relational Databases, Debugging, Functional Testing, Version Control
English: Proficient in reading and understanding technical documentation.

EDUCATION

Sai Gon University *2021 – 2026*
Engineer's Degree in Information Technology
